LEARNING ABOUT ANIMALS AT SCHOOL

How do children learn about wildlife? And is what they learn the sort of thing they should be learning? It is my belief that children should not just be acquiring knowledge of animals but also developing attitudes and feelings towards them based on exposure to the real lives of animals in their natural habitats. But is this happening?

Some research in this area indicates that it is not. Learning about animals in school is often completely disconnected from the real lives of real animals, with the result that children often end up with little or no understanding or lasting knowledge of them. They learn factual information about animals, aimed at enabling them to identify them and have various abstract ideas about them, but that is the extent of their learning. Children's storybooks tend to personify animals as characters rather than teach about

For direct contact with wild and international animals, the only opportunity most children have is visiting a zoo. The educational benefit of this for children is often given as the main reason for doing it but research has shown that zoo visits seldom add to children's knowledge of animals - the animals are simply like exhibits in a museum that the children look at without engaging with them as living creatures. Children who belong to wildlife or environmental organizations or who watch wildlife TV programmes, however, show significantly higher knowledge than any other group of children studied in research. The studies show that if children learn about animals in their natural habitats, particularly through wildlife-based activities, they know more about them than they do as a result of visiting zoos or learning about them in the classroom.

Research has also been done into the attitudes of children towards animals. It shows that in general terms, children form strong attachments to individual animals, usually their pets, but do not have strong feelings for animals in general. This attitude is the norm regardless of the amount or kind of learning about animals they have at school. However, those children who watch television wildlife programmes show an interest in and affection for wildlife in its natural environment, and their regard for animals in general is higher.

However, there is evidence that all of this is changing, and changing fast. The advent of the computer and interactive multimedia instruction in schools is changing the way that children learn about and perceive animals. The inclusion of pictures and audio enables children to look at and hear an

animal at the same time. There is evidence that children recall more when they have learnt about animals in this way, and furthermore this is the case whether the animal is one they were previously familiar or unfamiliar with.

Interactive multimedia instruction has opened up a whole new world of learning about animals. It has made it possible to educate children about wildlife beyond simple facts and to inspire in children an understanding of their real lives and affection and respect for them. This is particularly important in modern urban life, where children's only direct experience of animals is likely to be with domestic pets. Without first-hand experiences of wildlife, children need other ways of gaining an appreciation of and respect for animals. Previously, only the minority of children who belonged to wildlife organizations or watched TV wildlife programmes developed this attitude. Now, computer technology is transforming the way children gain knowledge of wildlife. Games, stories, audio recordings, photographs, movies and spoken narration all combine in multimedia form to present animals as real living creatures, as well as providing factual information about them.

In this way, children can appreciate the unique qualities of different animals and engage with wildlife in a more personal way than in the past. This is important, because what happens to the world's wildlife will depend to at least some extent on the attitudes towards animals that people acquire as children. If they learn about them as real, living creatures in their natural habitats, they are more likely to have respect for them and to be concerned about their treatment when they are older.

What issue does the writer raise in the first paragraph?		
A The outcome of what children learn about animals		
B The amount of learning about animals that children		
do 🗌		
C The level of interest that children have in learning		
about animals		
What opinion does the writer express in the second		
paragraph?		
A Children's learning about animals at school has the		
wrong emphasis.		
B What children learn about animals at school is often		
inaccurate.		
C Children's storybooks are an effective way of teaching		
them about animals.

3	What does the writer say about zoo visits?	10 The writer's main point in the text as a whole is that
	A Children don't enjoy them as much as adults think	
	they do.	A children should learn about how animals really live
	B They have less educational benefit than they are believed to have.	B children enjoy learning about animals with interactive multimedia instruction
	C They can be upsetting for some children.	C some children are much more interested in animals
4	What does the writer say about learning about animals in	than others
	their natural habitats?	Reading total 10
	A It is very difficult for most children to do this.	
	B It teaches children more about animals than other methods.	WRITING
	C It requires a lot of effort from children.	Choose <u>one</u> of the essay titles below and write approximately 250 words:
5	Research shows that children's attitudes to animals	1 A lot of computer games are addictive and violent. As a
	A differ from what adults might expect them to be	result the minimum age for most games should be 18.
	B depend on whether or not they have pets	2 To reduce the number of accidents on the roads
	C are not affected by what they learn about them at school	anyone using their mobile whilst driving should be arrested.
6	The writer says that the use of interactive multimedia instruction	3 To help reduce CO ₂ emissions people should only be allowed to fly once or twice a year.
	A is most effective for teaching about animals children	Writing total 10
	know nothing about	writing total
	B increases the amount that children can remember after lessons	Reading and Writing total 20
	C works better for some children than for others	
7	The writer says that in modern urban life, interactive multimedia instruction	
	A is a good substitute for direct contact with wildlife	
	B is particularly effective for children who do not have pets	
	C can relate the lives of animals to children's own	
	lives	
8	What does the writer say about children who watch TV wildlife programmes?	
	A They are very keen on interactive multimedia instruction about animals.	
	B They no longer know more about animals than other children.	
	C There are now more of them because of interactive	
	multimedia instruction.	
9	The writer says in the last paragraph that what children	
	learn about animals at school	
	A has an effect on how their personalities develop	
	B may change as they get older	
	C will have some effect on attitudes to wildlife in the	
	future	

Listening and Speaking

LISTENING

 Listen to five people discussing issues connected with animals. Match the speakers (1–5) to what their main topic is (A–H). Speaker 1	 Ask your partner these questions. Which part of the world would you most like to visit? Which place in your own country would you most recommend to visitors? What's your favourite animal? Which animal frightens you the most? If you went to live in another country, what would you miss most? Now answer your partner's questions. Now talk about one of these statements, saying if you agree or disagree. Give reasons. 'Tourism does more harm than good.' 'Too many animals are badly treated.' 'Immigrants bring many benefits to the countries they
animals is widely shared H people who take no interest in animals at all	go to.' 4 Now listen to your partner. Do you agree with
2 Listen to a talk about Ellis Island near New York, a place where many immigrants went when they arrived in the US. Complete the sentences using no more than three words. ELLIS ISLAND Immigrants were received and processed at the 1 on Ellis Island. First and second class passengers were inspected 2 and then went straight into the US. Steerage and third class passengers were inspected by doctors so quickly that doctors called these inspections 3' The legal inspection of steerage and third class passengers was based on a document containing 4 Just 5 of the people arriving at Ellis Island were not allowed to enter the US.
